

Insect & Disease Control F.A.Q-Best Lawn

Insects must come in contact with treated area to be controlled

To help prevent infestation, a barrier of soil four to six feet around the structure, as well as two to three feet up the foundation wall, is treated. These areas are where insects are generally most active and where they may find entrance to your home.

Insects must come in contact with treated area to be controlled. Insects controlled are:

- Ants
- Bees
- Carpenter Ants
- Cockroaches
- Earwigs
- Fleas
- Flies
- Hornets
- Millipedes
- Silverfish
- Spiders
- Springtails
- Ticks
- Wasps
- Yellowjackets
